

# Role: Software Engineer - Web App

We are seeking qualified candidates to join our exciting company in the role of Software Engineer. If you're looking for a fast-paced, challenging opportunity, read on!

## Role Summary:

This role will be located in Hong Kong. As a Software Engineer you will be joining our product team and contributing to the software design, software development, and overall product lifecycle for a product that our users love. The engineering process is highly collaborative. Software Engineers are expected to collaborate daily as they work through user stories and support products as they evolve. As a Software Engineer you will grow your skills while you create, support, and deploy production applications. Software Engineers will be paired with Senior Engineers to grow and diversify their skillset in a relatively low-pressure environment. Software Engineers are expected to contribute to the overall product development but just as importantly, grow and diversify their skills while gaining valuable hands on experience.

## Qualifications/Requirements

- 1 or more year's specific industry experience.
- Graduate with High Diploma or above with IT-related subjects studied is highly preferred
- Hands on experience in Nodejs, Javascript, HTML5, CSS, Git.
- Hands on experience in MongoDB, Express framework and Angular JS.
- Good communication skills, independent and motivated. Good troubleshooting skills

## Experience in these areas is a plus

- One year of hands on experience on Nodejs, Javascript, HTML5, CSS application development.
- Experience with ElasticSearch is preferable
- Experience with Restful API and websocket
- Experience with JIRA is preferable
- Experience with Amazon Web Services is preferable
- Strong in Linux (Ubuntu) or Mac development environment
- Familiarity with RESTful services. Full SDLC experience.

## Benefits

- Five-day work week
- Life insurance
- Medical insurance
- Performance bonus
