

Computer Vision – Efficiency, Hardware Friendliness and Applications

K.-T. Tim Cheng, HKUST

Vision & System Design Lab

- **Computer Vision**

- Efficiency and Hardware Friendliness:

- Neural network compression via quantization, channel pruning and neural architecture search (NAS)

- Medical and AIoT Applications:

- Medical image analysis – detection, segmentation, and diagnosis
 - Smart drone cinematography for filming human motion
 - Wellness analytics for seniors in elderly care centers
 - Food waste analytics in Canteens and visual feedback for behavior changes

- **AI Chips/Accelerators**

Neural Network Compression and HW implementation (AI Accelerator)

4 ways of compressing and accelerating the neural networks:

(1) Weights and activation quantization

(2) Network channel pruning

(3) Knowledge distillation

(4) Compact neural network design and search

- Quantization:
 - Bi-Real Net (ECCV 2018 & IJCV 2019)
 - ReActNet (ECCV 2020)
 - Binarizing MobileNet via Evolutionary Search (CVPR 2020)
- Network Channel Pruning:
 - MetaPruning (ICCV 2019)
- Neural Architecture Search:
 - Data-free Neural Architecture Search (submitted for publication)
- Knowledge distillation
 - Label Smoothing (ICLR 2021)

AI for Medical Imaging Aided Diagnosis

- Tremendous amount of Medical imaging data
 - 40 billion RMB in 2015, 80% of all medical data
 - 70% clinical diagnosis and treatment rely on imaging data
- Lack of expertise's for reading data (10-year growth cycle)

• **AI + Medical Imaging Analysis**

- ✓ **Objective and quantitative results**
- ✓ **Better efficiency and accuracy**
- ✓ **Optimized medical resources**

Our Research in AI for MID

- **AI for Medical Imaging Diagnosis — 2nd Pair of Eyes of a Clinician**

Prostate cancer detection & diagnosis in MRI

Cerebral aneurysm analysis in CT

Renal function Analysis in DCE-MRI

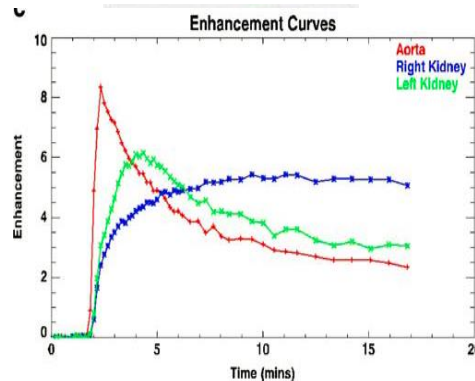

Large-Scale Histopathology Image Analysis

PCa segmentation

Aneurysm measurement & development analysis

- Retinal Vessel Segmentation
- Gland Instance Segmentation
- Pancreas Segmentation
- Breast lesion detection
-

New techniques explored:

- Federated learning
- Domain adaptation
- Data augmentation
- ..

Vision & System Design Lab

- **Computer Vision**

- Efficiency and Hardware Friendliness:

- Neural network compression via quantization, channel pruning and neural architecture search (NAS)

- Medical and AIoT Applications:

- Medical image analysis – detection, segmentation, and diagnosis
 - **Smart drone cinematography for filming human motion**
 - Wellness analytics for seniors in elderly care centers
 - Food waste analytics in Canteens and visual feedback for behavior changes

- **AI Chips/Accelerators**

Existing Intelligent Applications in Consumer Drones

Captured by **DJI Mavic QuickShot** mode

1. Predefined camera trajectory
2. No camera-subject interaction

Captured by **DJI Mavic ActiveTrack** mode

1. Oversimplify the video content
2. Fixed viewpoint

Imitation Learning to Automate Drone Filming of Human Motion Video

Our approach: Imitating given professional videos

Autonomously Captured Video with Style D

Vision & System Design Lab

- **Computer Vision**

- Efficiency and Hardware Friendliness:

- Neural network compression via quantization, channel pruning and neural architecture search (NAS)

- Medical and AIoT Applications:

- Medical image analysis – detection, segmentation, and diagnosis
 - Smart drone cinematography for filming human motion
 - Wellness analytics for seniors in elderly care centers
 - Food waste analytics in Canteens and visual feedback for behavior changes

- **AI Chips/Accelerators**

AIR@InnoHK

ACCESS: AI Chip Center for Emerging Smart Systems

Lead University:

HKUST

Participating Univ.:

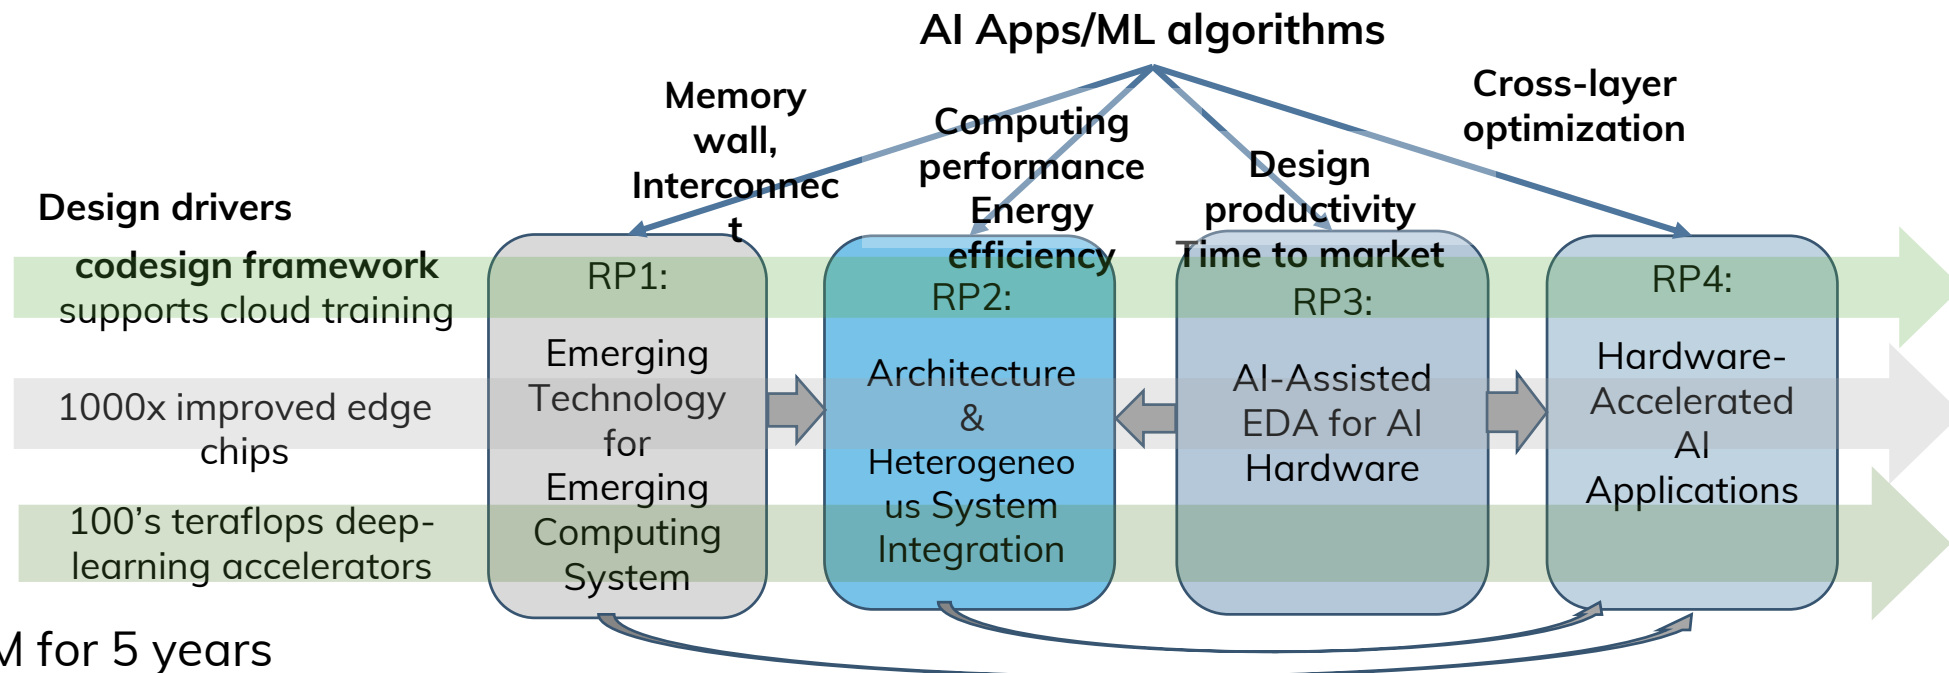

Stanford, UIUC, CUHK, HKU

Project Investigator

Tim Cheng, HKUST

Mission: Realizing *ubiquitous AI applications in society* by:

1. Improving AI chip performance/energy efficiency by 1,000X
2. Accelerating AI chip design productivity and time-to-market

* Initial funding: \$443.9M for 5 years

A Unique Team of World Leading Experts with Complementary Expertise

AIR@InnoHK

ACCESS:
AI Chip
Center for
Emerging
Smart
Systems

IC Design

Tim CHENG
EDA, IC design and
Computer Vision

- IEEE Fellow
- Former Director of MURI center on 3D hybrid circuits
- 11 best paper awards
- 12 US patents and co-founded 3 companies

Boris MURMANN
IC design

- IEEE Fellow
- Co-Director, Stanford SystemX Alliance
- Program Chair, ISSCC
- Director, Stanford's System Prototyping Facility

Deming CHEN
EDA, AI accelerator

- IEEE Fellow
- EIC, ACM Trans. on Reconfigurable Tech. & Systems
- 8 best paper awards
- ACM SIGDA Outstanding Faculty Award

Nanoelectronics & Emerging Devices

Philip WONG
VLSI, Nanoelectronics,
emerging devices

- IEEE Fellow
- Co-Director, Stanford SystemX Alliance
- Executive Committee member of several multi-univ. centers

Mansun CHAN
Nanoelectronics

- IEEE Fellow
- Co-founder >5 companies
- IEEE Electron Device Society Education Award 2017
- R&D 100 Award for the BSIM3 Project

Francois ANDRIEU
Nanoelectronics

- Led industrial projects of STMicroelectronics, Globalfoundries and IBM
- IEEE/SEE Brillouin Award, 2018

Design Methodology & EDA

Martin WONG
EDA

- IEEE and ACM Fellows
- Former Executive Associate Dean of Engineering, UIUC
- 6 best paper awards
- Graduated >50 PhDs

Evangeline YOUNG
Physical synthesis, EDA

- Founding Chair, IEEE CEDA Hong Kong Chapter
- Executive committee, Int'l conference on CAD 2019
- 4 best paper awards

Elyse ROSEBAUM
Nanoelectronics, circuits

- IEEE fellow
- Director, NSF Center for Advanced Electronics through Machine Learning
- SRC Technical Excellence Award

Architecture

CYTSUI
IC design, architecture &
embedded systems

- Head, Division of Integrative Systems and Design
- PI for multiple ITF projects on sensor design and IC design

Wen-Mei HWU
Parallel computing

- IEEE and ACM Fellows
- ACM SigArch Maurice Wilkes Award
- ACM Grace Murray Hopper Award
- IEEE CS Charles Babbage Award

Priyanka RAINA
AI Accelerator,
Architecture

- Research Scientist, Nvidia Research 2018
- Program Committee member and Session Chair, Hot Chips 2019

Embedded & Reconfigurable AI/Machine Learning & Applications

Jiang XU
Architecture, silicon
photonics

- Associate Editor, IEEE Trans. on CAD, Trans. on VLSI
- IEEE Distinguished Lecturer
- ACM Distinguished Speaker

Wei Zhang
EDA, reconfigurable
system

- Associate Editor, IEEE Trans. on CAD, IEEE Trans. on VLSI, and Trans. on Reconfigurable Tech and Systems
- Best paper award, ICCAD 2017

Ngai WONG
EDA, machine learning

- Associate Editor, IEEE Trans. on CAD
- Co-founder, IEEE CEDA HK Chapter

David TSE
Information theory

- US NAE member
- IEEE Fellow
- IEEE Claude E Shannon Award 2017
- IEEE Richard W Hamming Medal 2019

Stephen BOYD
Optimization theory
ML, circuit design, etc.

- US NAE member
- Chinese Academy of Engineering foreign member
- IEEE Fellow
- Authors of several textbooks and open source SW packages

Edmund LAM
Imaging systems

- IEEE Fellow
- OSA Fellow
- IBM Faculty Award
- Published >300 papers
- Associate Dean of Engineering, HKU
