## Example of restricted bin packing.

Let $t=5$ and all items be 2 or 3 so $k=2$. An instance of restricted bin packing is $I=\left(i_{1}, i_{2}\right)$ where $i_{1}$ is the number of 2 's and $i_{2}$ is the number of 3 s .
The only possible ways to pack one bin are using $2,3,22,23,223$ so $\mathcal{Q}=\{(1,0),(0,1)(2,0),(1,1)\}$. We start by setting $B I N S(q)=1$ for all $q \in Q$ and

$$
B I N S\left(i_{1}, i_{2}\right)=1+\min _{\left(q_{1}, q_{2}\right) \in Q} B I N S\left(i_{1}-q_{1}, i_{2}-q_{2}\right) .
$$

| $i_{1}$ | $i_{2}$ | $B I N S\left(i_{1}, i_{2}\right)$ |
| :---: | :---: | :---: |
| $\mathbf{0}$ | $\mathbf{1}$ | $\mathbf{1}$ |
| 0 | 2 | 2 |
| 0 | 3 | 3 |
| $\mathbf{1}$ | $\mathbf{0}$ | $\mathbf{1}$ |
| $\mathbf{1}$ | $\mathbf{1}$ | $\mathbf{1}$ |
| $\mathbf{1}$ | 2 | 2 |
| $\mathbf{1}$ | 3 | 3 |
| $\mathbf{2}$ | $\mathbf{0}$ | $\mathbf{1}$ |
| 2 | 1 | 2 |
| 2 | 2 | 2 |
| 2 | 3 | 3 |
| $\mathbf{3}$ | 0 | 2 |
| $\mathbf{3}$ | 1 | 2 |
| $\mathbf{3}$ | 2 | 3 |
| $\mathbf{3}$ | 3 | 3 |
