eMentor

- An Artificial Intelligence based application that is trained on different topics (like coding, mathematics, essay writing, email writing, etc.)
- Helps cater the experience to be more personalised for each individual using it.
- Similar concepts as ELIZA (a natural language processing computer program) which was a chatbot therapist, launched initially in 1966.

eMentor

- Interactive interface
- Helps understands concepts better, as the user learns the procedure by doing it themselves, and only gets hints from the eMentor.
- The concept, aligns with the roles of professors and teachers in our lives, who guide us to the solution instead of giving us the answer like a search engine would

How about you start by adding one element each, and try to repeat it for all the elements.

I don't know how to add all elements of an array?
