Social Networking Website With Event Scheduling and LBS

Student : CHENG Yan Tung, Edison CHENG Sen Chung, Jaspar

Advised by : Prof. David ROSSITER

Introduction

Our website provides a user-friendly event scheduling platform for people to vote and find the most suitable time, place and activity for their groups. It also provides interesting features to encourage people to join activities and have gatherings with their friends and relatives. In addition, it has a Google map of Hong Kong with both a map view and street view, so users can plan their gatherings and easily navigate to their destinations.
Objective

Develop a user-friendly website with a event scheduling, permissions management, group formation and membership system.

Develop a mobile version of the website that allows users to conveniently access the website information on the go and that also provides some location based services.

System Overview

| Computer	Browser		Server		PHP
Mobile Device	Mobile Browser				Mysql (database))

Since most mobile device users already have a lot of apps installed on their mobile devices, most of them prefer to visit a website from their mobile browser instead of installing another app, so we decided to make a mobile version of

User-friendly Event Scheduling

Location Service with Google Map

Conclusion

To conclude, the project provided us a great opportunity to experience how a computer science project is done. Our project is not just about having fun, showing off skills. It is for everyone to use. It is a great idea for people to vote and find the most suitable time, place and activity. People can really plan their gatherings well and easily navigate to their destinations.
