THE UNIVERSITY *of* EDINBURGH

A CYK+ Variant for SCFG Decoding Without a Dot Chart

Rico Sennrich

Institute for Language, Cognition and Computation
University of Edinburgh

October 25 2014

Outline

THE UNIVERSITY *of* EDINBURGH

- CYK+ and the role of the dot chart
- Recursive variant
- Evaluation

Problem

CYK+ parsing

- CYK+ and Earley-style variants are popular parsers for decoding with SCFGs (Moses, cdec, SAMT, Jane, ...).
- alternative: binarization and decoding with plain CYK.

problem

- CYK+ parsing [with syntactic models] takes a lot of memory.

$n = 20$	$n = 40$	$n = 80$
0.32 GB	2.63 GB	51.64 GB

- most of the memory is consumed by the dot chart.

Problem

CYK+ parsing

- CYK+ and Earley-style variants are popular parsers for decoding with SCFGs (Moses, cdec, SAMT, Jane, ...).
- alternative: binarization and decoding with plain CYK.

problem

- CYK+ parsing [with syntactic models] takes a lot of memory.

$n = 20$	$n = 40$	$n = 80$
0.32 GB	2.63 GB	51.64 GB

- most of the memory is consumed by the dot chart.

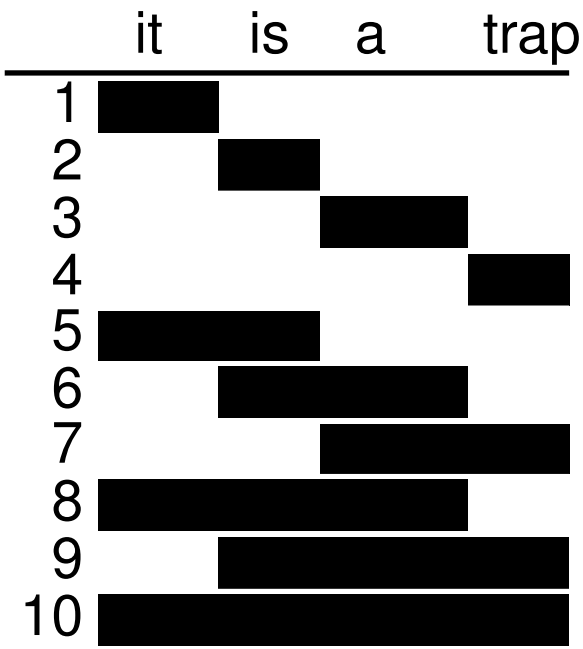
solution

- in this talk, we present a variant of CYK+ without a dot chart.
- our variant requires less memory **and** is faster, with same result.

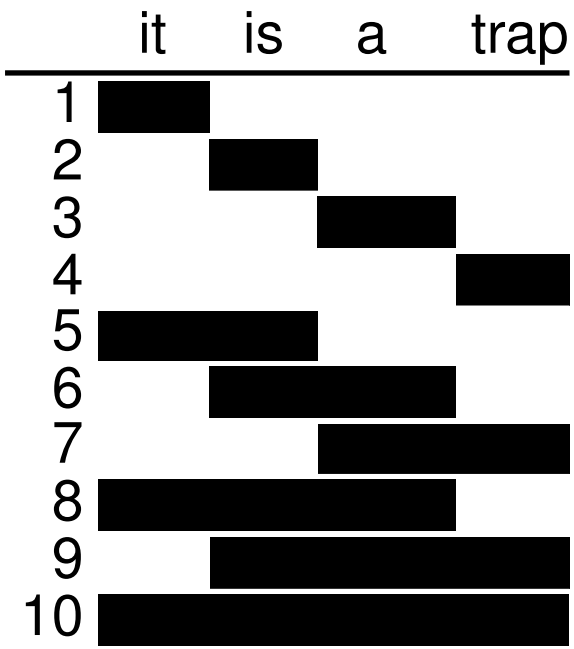
The CYK+ algorithm

- bottom-up chart parser
- generalization of CYK to n-ary rules
- two data structures:
  - main chart: non-terminal symbols
  - dot chart: rule prefix applications (dotted items)
- difference to Earley: dotted item represents all rules with same prefix
- dot chart allows dynamic binarization:
  rules that match span (i,j) are found by combining dotted item in (i,k) and (non-)terminal symbol in span (k,j).

CYK+



dot chart



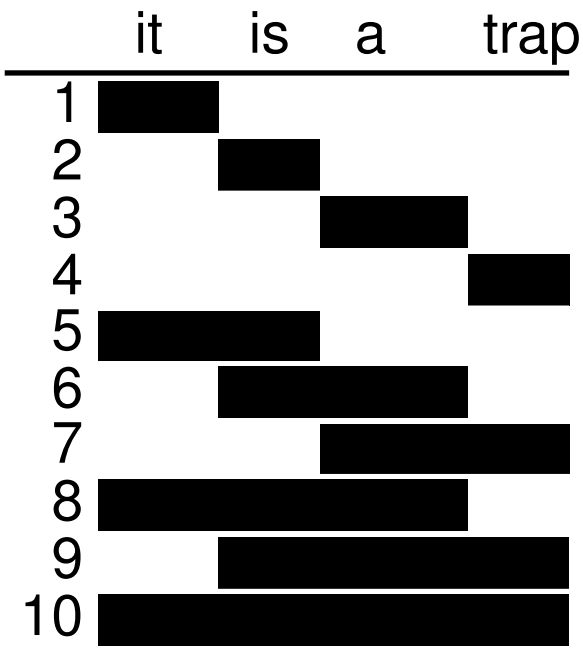
main chart

$$
\begin{aligned}
S &\rightarrow \text{NP V NP} \\
\text{NP} &\rightarrow \text{ART NN} \\
\text{NP} &\rightarrow \textit{it} \\
\text{V} &\rightarrow \textit{is} \\
\text{ART} &\rightarrow \textit{a} \\
\text{NN} &\rightarrow \textit{trap}
\end{aligned}
$$

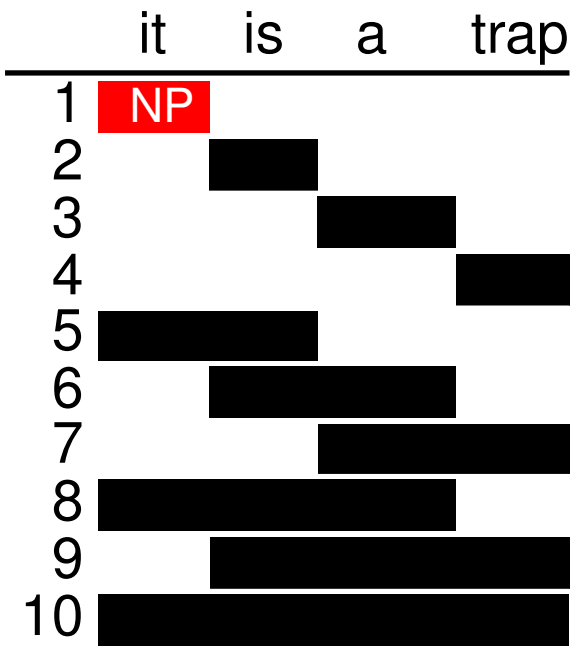
grammar

CYK+ steps

1. search for terminal rule of size 1.
2. combine dotted item and (non-)terminal of two subspans.
3. create new dotted item from (non-)terminal in cell.



dot chart



main chart

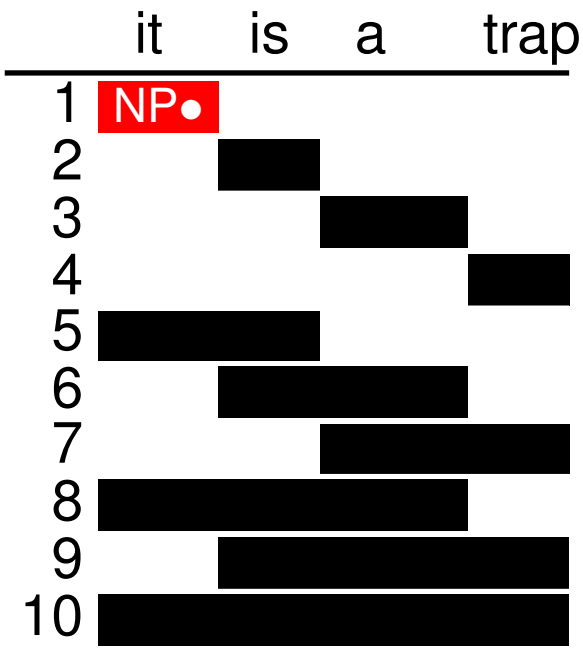
$$
\begin{aligned}
S &\rightarrow NP\ V\ NP \\
NP &\rightarrow ART\ NN \\
NP &\rightarrow \textit{it} \\
V &\rightarrow \textit{is} \\
ART &\rightarrow \textit{a} \\
NN &\rightarrow \textit{trap}
\end{aligned}
$$

grammar

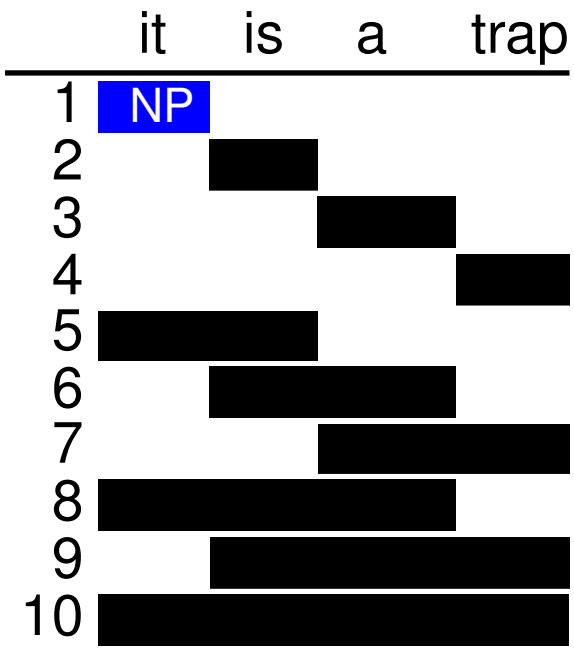
CYK+ steps

1. search for terminal rule of size 1.
2. combine dotted item and (non-)terminal of two subspans.
3. create new dotted item from (non-)terminal in cell.

CYK+



dot chart



main chart

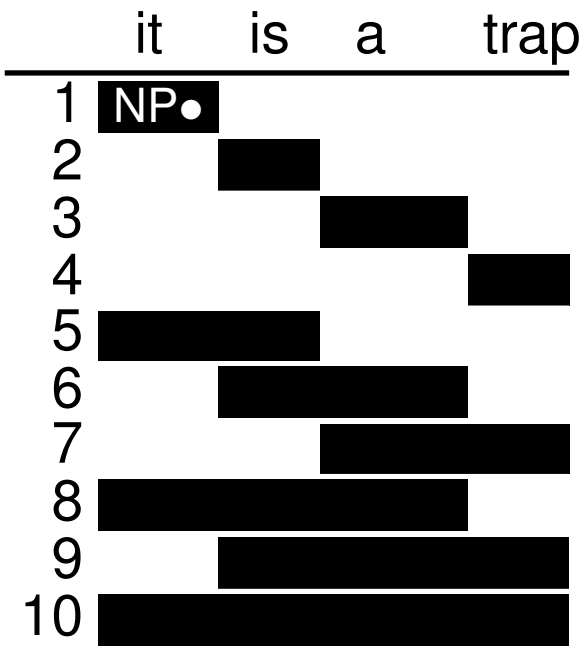
$$
\begin{aligned}
S &\rightarrow NP\ V\ NP \\
NP &\rightarrow ART\ NN \\
NP &\rightarrow \textit{it} \\
V &\rightarrow \textit{is} \\
ART &\rightarrow \textit{a} \\
NN &\rightarrow \textit{trap}
\end{aligned}
$$

grammar

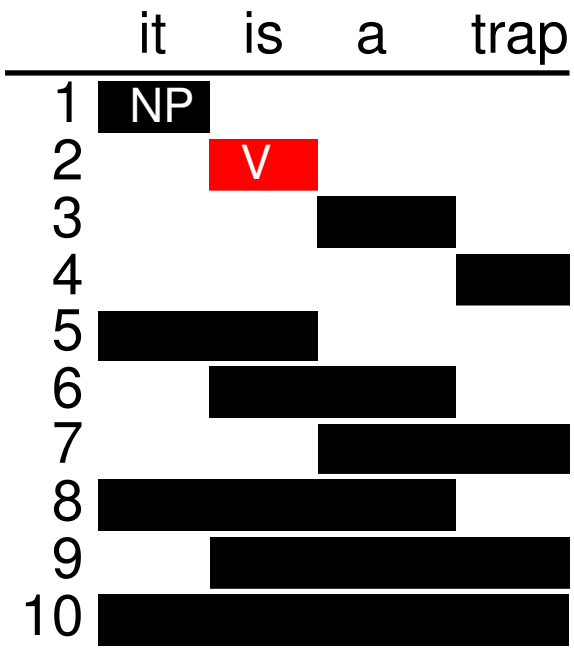
CYK+ steps

1. search for terminal rule of size 1.
2. combine dotted item and (non-)terminal of two subspans.
3. create new dotted item from (non-)terminal in cell.

CYK+



dot chart



main chart

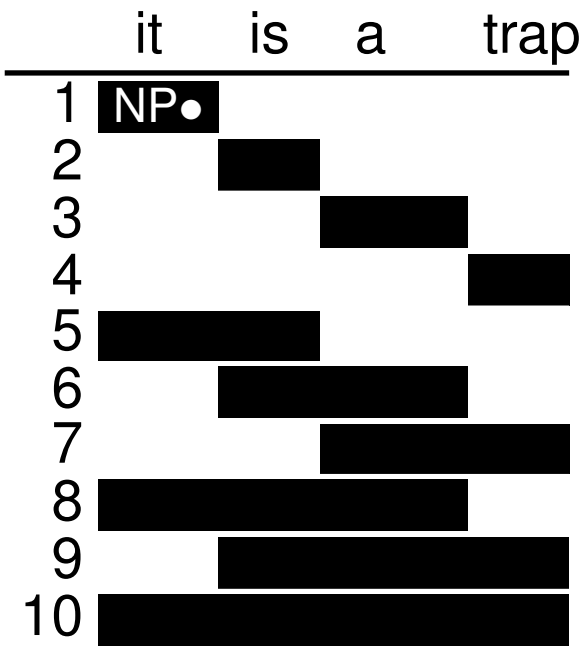
$$
\begin{aligned}
S &\rightarrow \text{NP V NP} \\
\text{NP} &\rightarrow \text{ART NN} \\
\text{NP} &\rightarrow \textit{it} \\
\text{V} &\rightarrow \textit{is} \\
\text{ART} &\rightarrow \textit{a} \\
\text{NN} &\rightarrow \textit{trap}
\end{aligned}
$$

grammar

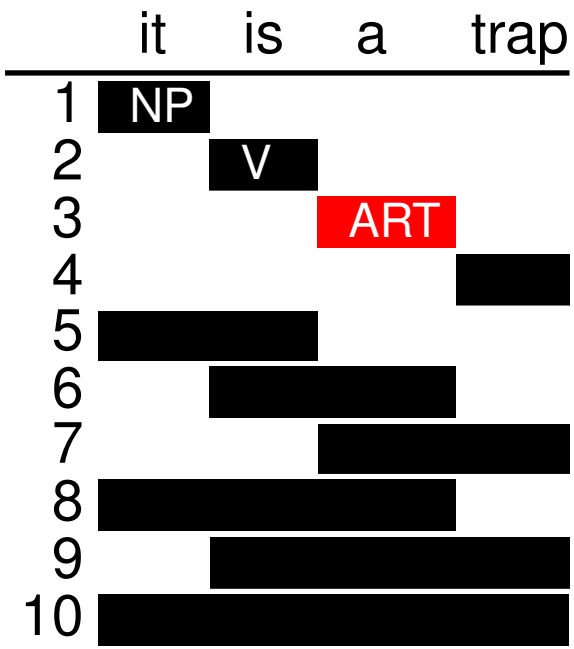
CYK+ steps

1. search for terminal rule of size 1.
2. combine dotted item and (non-)terminal of two subspans.
3. create new dotted item from (non-)terminal in cell.

CYK+



dot chart



main chart

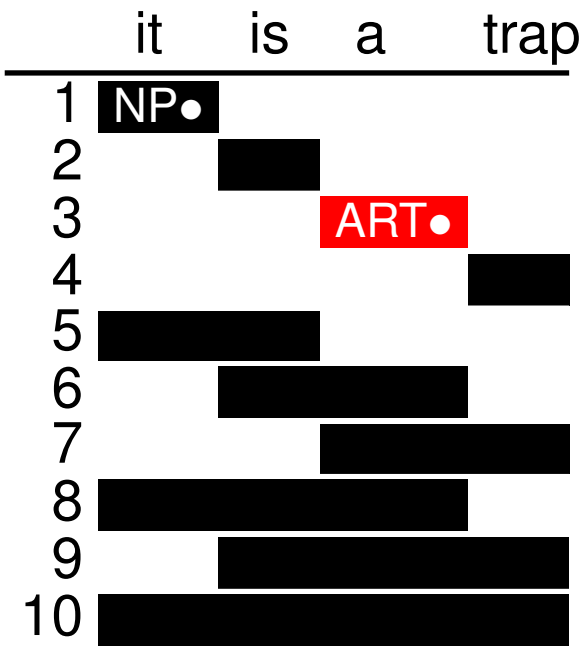
$$
\begin{aligned}
S &\rightarrow \text{NP V NP} \\
\text{NP} &\rightarrow \text{ART NN} \\
\text{NP} &\rightarrow \textit{it} \\
\text{V} &\rightarrow \textit{is} \\
\text{ART} &\rightarrow \textit{a} \\
\text{NN} &\rightarrow \textit{trap}
\end{aligned}
$$

grammar

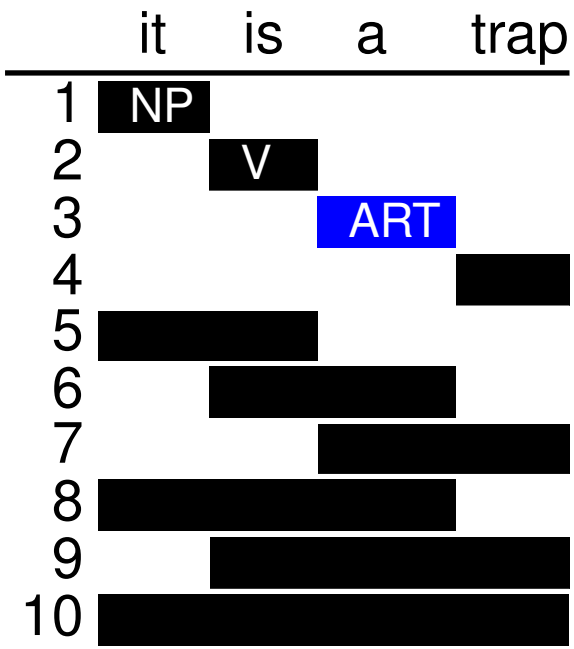
CYK+ steps

1. search for terminal rule of size 1.
2. combine dotted item and (non-)terminal of two subspans.
3. create new dotted item from (non-)terminal in cell.

CYK+



dot chart



main chart

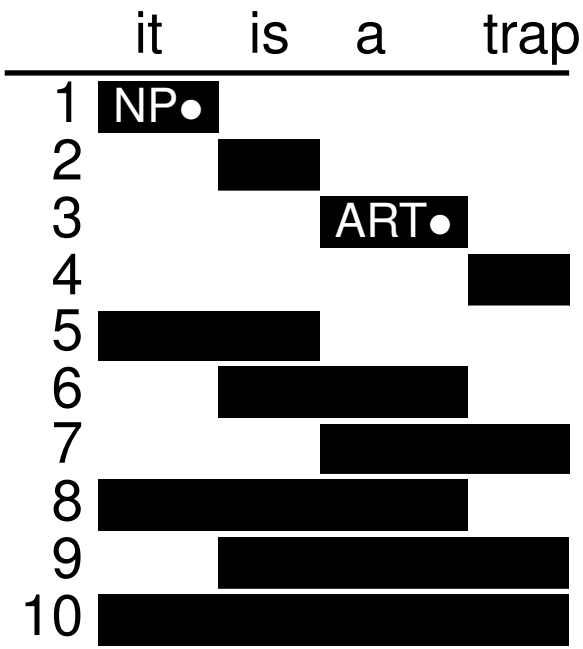
$$
\begin{aligned}
S &\rightarrow NP\ V\ NP \\
NP &\rightarrow ART\ NN \\
NP &\rightarrow \textit{it} \\
V &\rightarrow \textit{is} \\
ART &\rightarrow \textit{a} \\
NN &\rightarrow \textit{trap}
\end{aligned}
$$

grammar

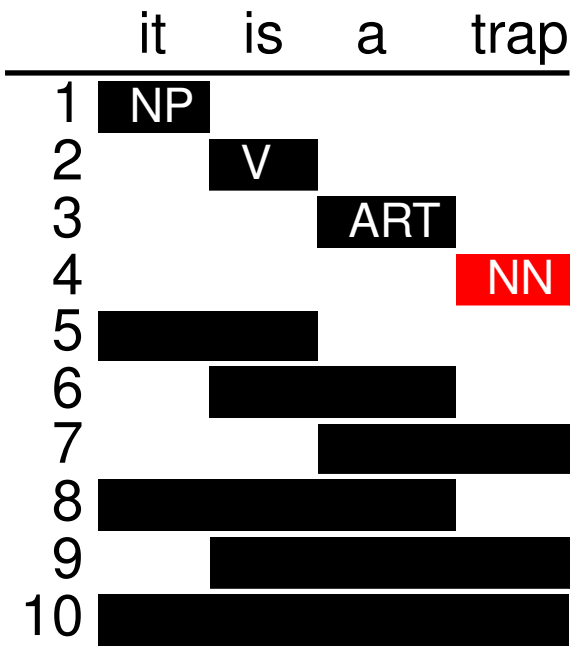
CYK+ steps

1. search for terminal rule of size 1.
2. combine dotted item and (non-)terminal of two subspans.
3. create new dotted item from (non-)terminal in cell.

CYK+



dot chart



main chart

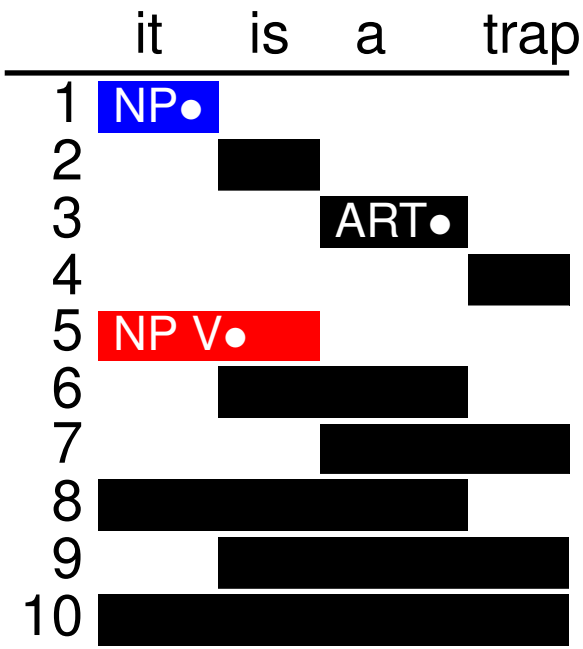
$$
\begin{aligned}
S &\rightarrow \text{NP V NP} \\
\text{NP} &\rightarrow \text{ART NN} \\
\text{NP} &\rightarrow \textit{it} \\
\text{V} &\rightarrow \textit{is} \\
\text{ART} &\rightarrow \textit{a} \\
\text{NN} &\rightarrow \textit{trap}
\end{aligned}
$$

grammar

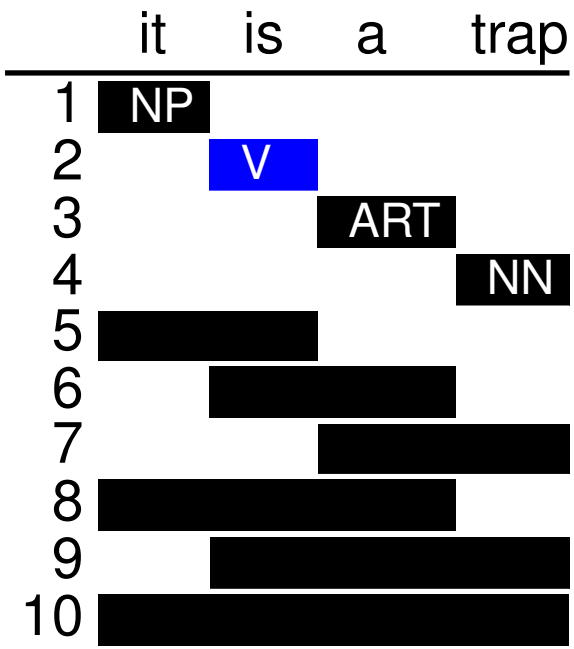
CYK+ steps

1. search for terminal rule of size 1.
2. combine dotted item and (non-)terminal of two subspans.
3. create new dotted item from (non-)terminal in cell.

CYK+



dot chart



main chart

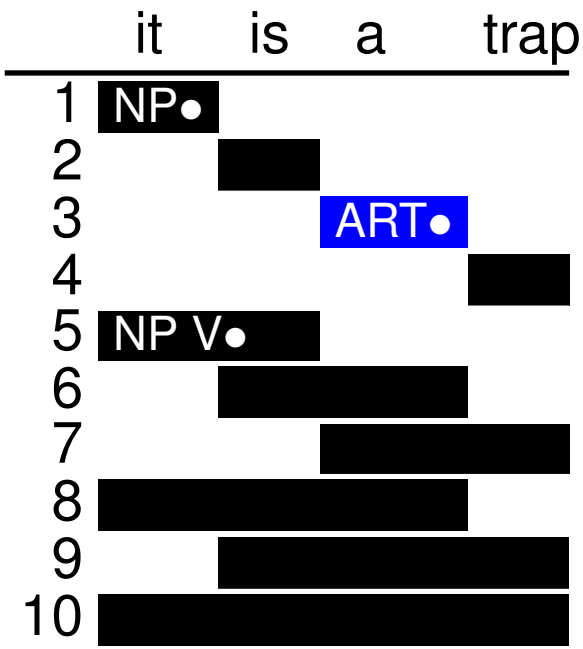
$$
\begin{aligned}
S &\rightarrow \text{NP V NP} \\
\text{NP} &\rightarrow \text{ART NN} \\
\text{NP} &\rightarrow \textit{it} \\
\text{V} &\rightarrow \textit{is} \\
\text{ART} &\rightarrow \textit{a} \\
\text{NN} &\rightarrow \textit{trap}
\end{aligned}
$$

grammar

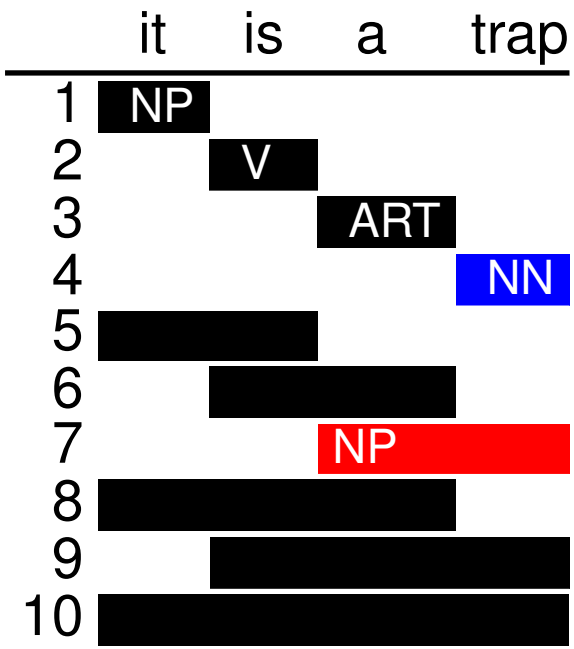
CYK+ steps

1. search for terminal rule of size 1.
2. combine dotted item and (non-)terminal of two subspans.
3. create new dotted item from (non-)terminal in cell.

CYK+



dot chart



main chart

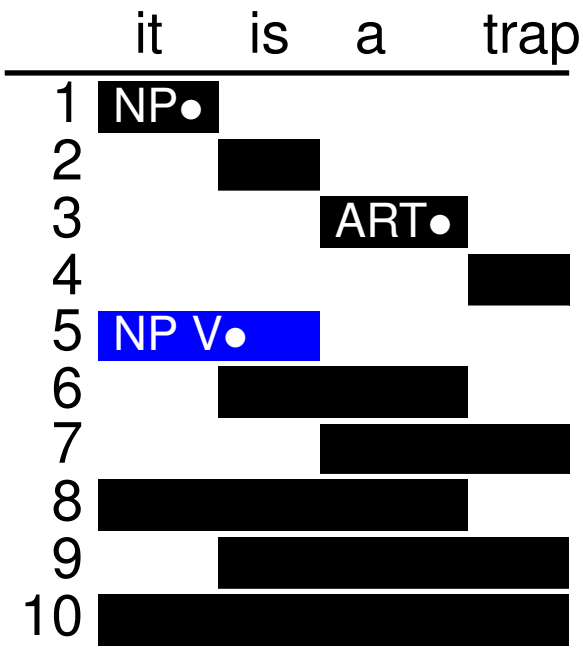
$$
\begin{aligned}
S &\rightarrow NP\ V\ NP \\
NP &\rightarrow ART\ NN \\
NP &\rightarrow \textit{it} \\
V &\rightarrow \textit{is} \\
ART &\rightarrow \textit{a} \\
NN &\rightarrow \textit{trap}
\end{aligned}
$$

grammar

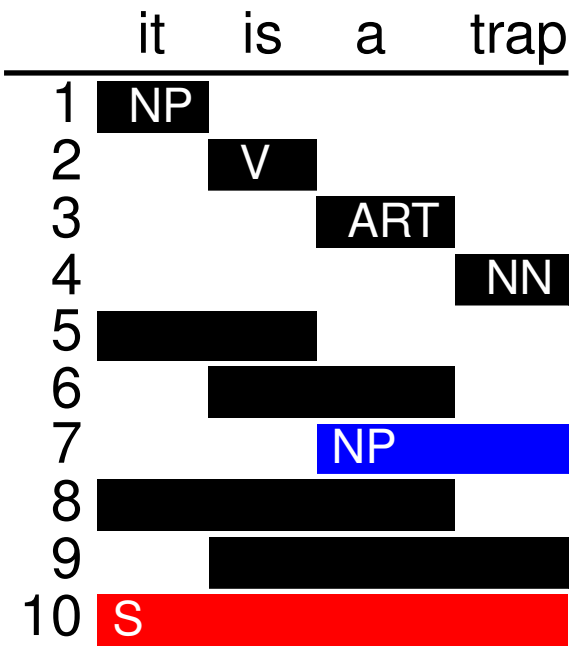
CYK+ steps

1. search for terminal rule of size 1.
2. combine dotted item and (non-)terminal of two subspans.
3. create new dotted item from (non-)terminal in cell.

CYK+



dot chart



main chart

$$
\begin{aligned}
S &\rightarrow NP\ V\ NP \\
NP &\rightarrow ART\ NN \\
NP &\rightarrow \textit{it} \\
V &\rightarrow \textit{is} \\
ART &\rightarrow \textit{a} \\
NN &\rightarrow \textit{trap}
\end{aligned}
$$

grammar

CYK+ steps

1. search for terminal rule of size 1.
2. combine dotted item and (non-)terminal of two subspans.
3. create new dotted item from (non-)terminal in cell.

CYK+: complexity considerations

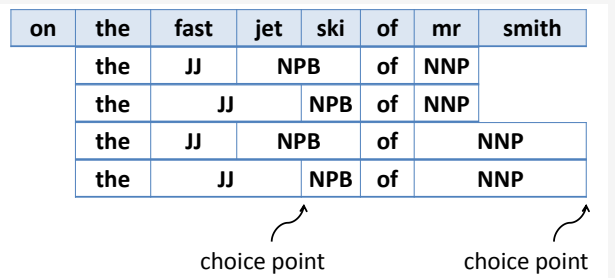
THE UNIVERSITY of EDINBURGH

monolingual 1-best parser

- main chart: $O(n^2)$
- dot chart: $O(n^2)$
- parsing steps: $O(n^3)$

SCFG decoding

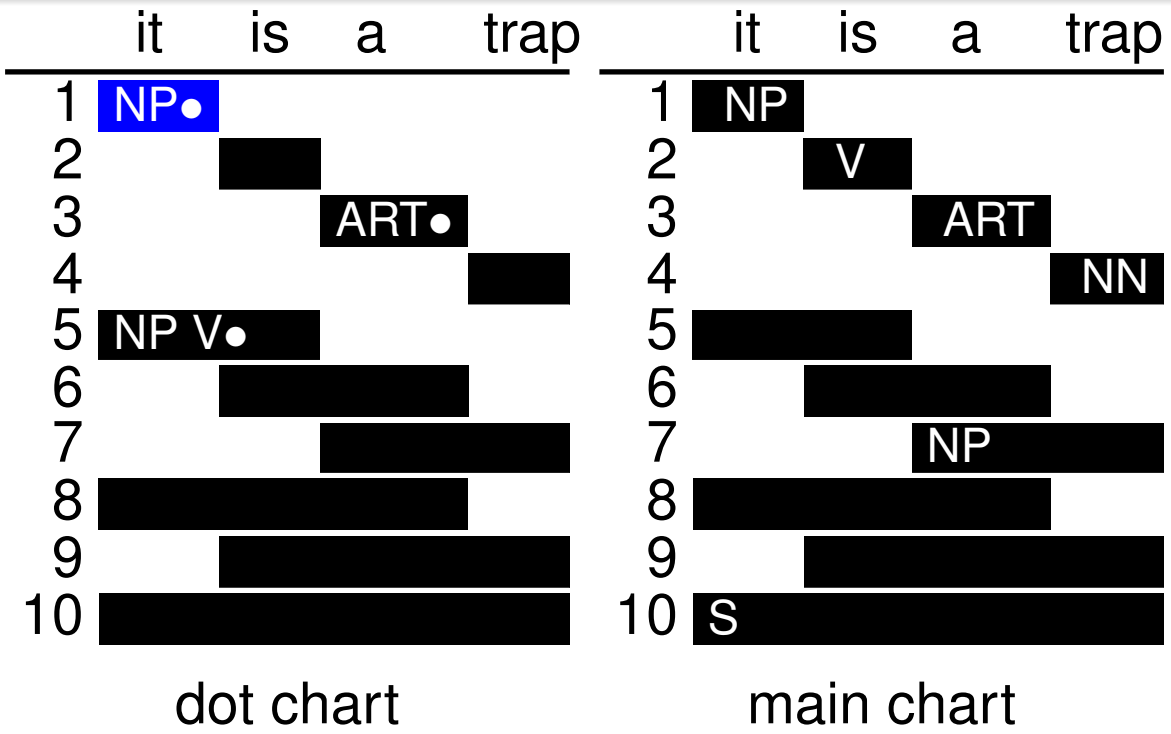
- Non-locality of LM scores restricts recombination of dotted items [Hopkins and Langmead, 2010]
- main chart: $O(n^2)$ (with beam search)
- dot chart: $O(n^{scope(G)})$
- parsing steps: $O(n^{scope(G)})$
- rule scope: number of choice points in rule



The dot chart in SCFG decoding

purpose of dot chart

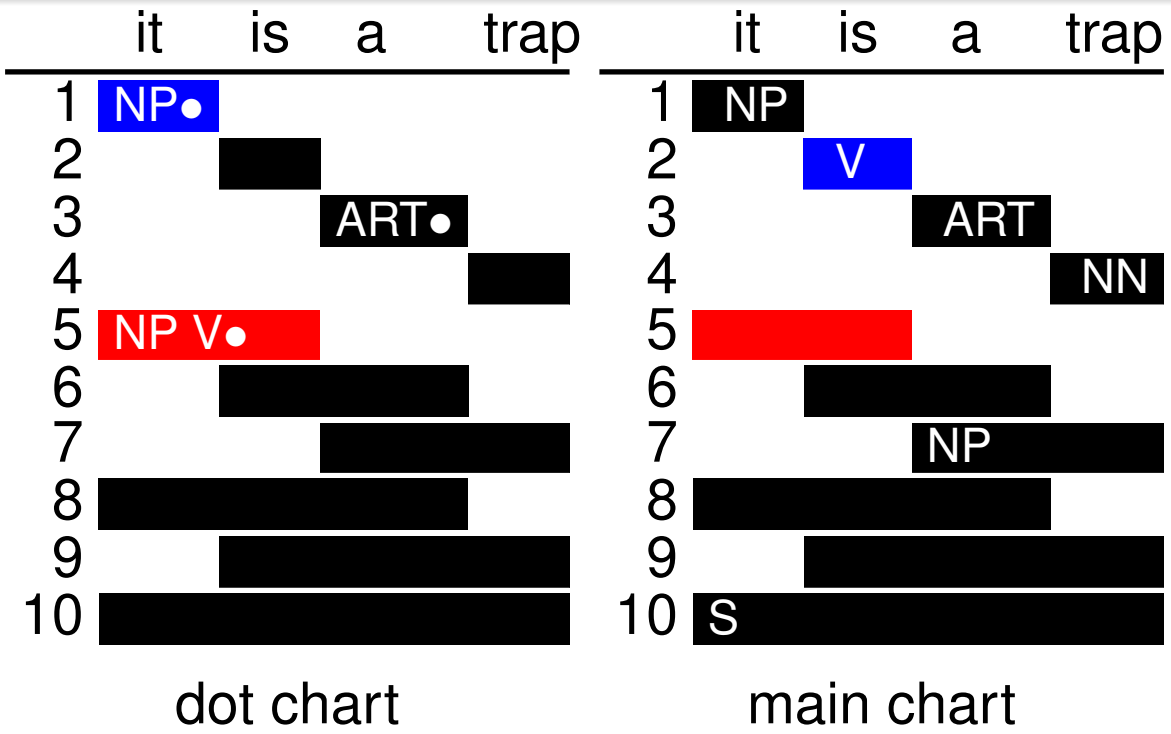
- allows recombination of different dotted items
  $\rightarrow$ does not apply to SCFG decoding
- allows re-use of same dotted item for different spans



The dot chart in SCFG decoding

purpose of dot chart

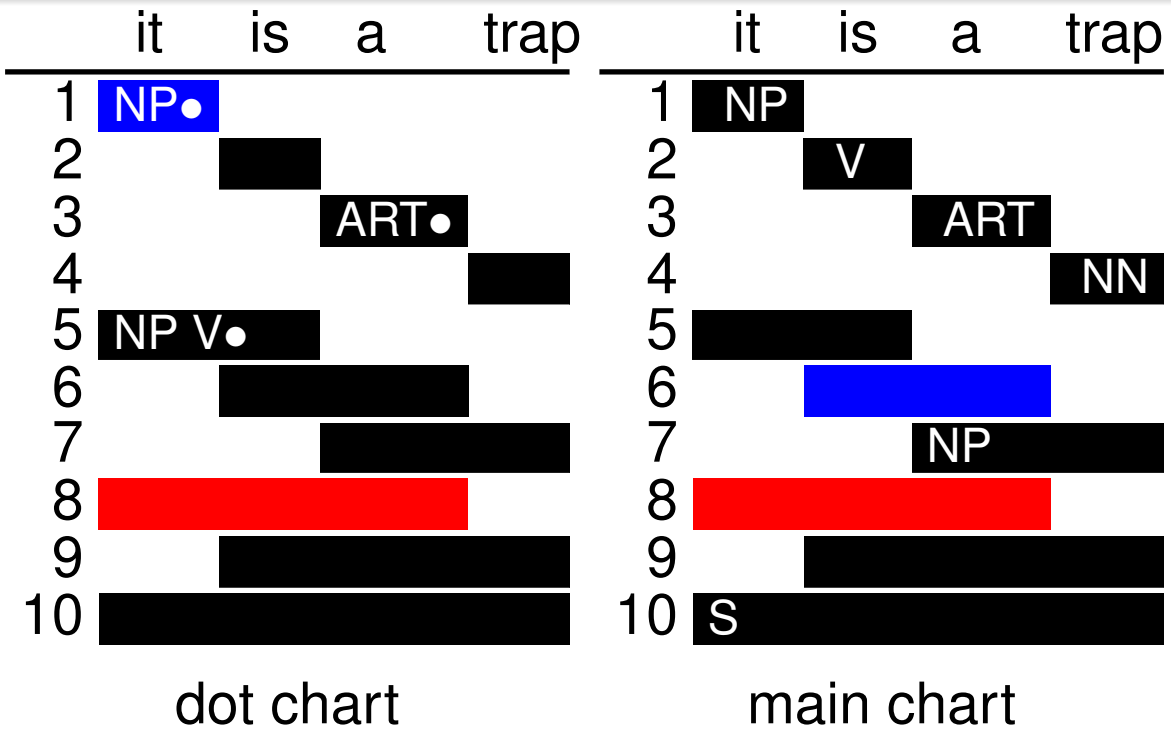
- allows recombination of different dotted items
  $\rightarrow$ does not apply to SCFG decoding
- allows re-use of same dotted item for different spans



The dot chart in SCFG decoding

purpose of dot chart

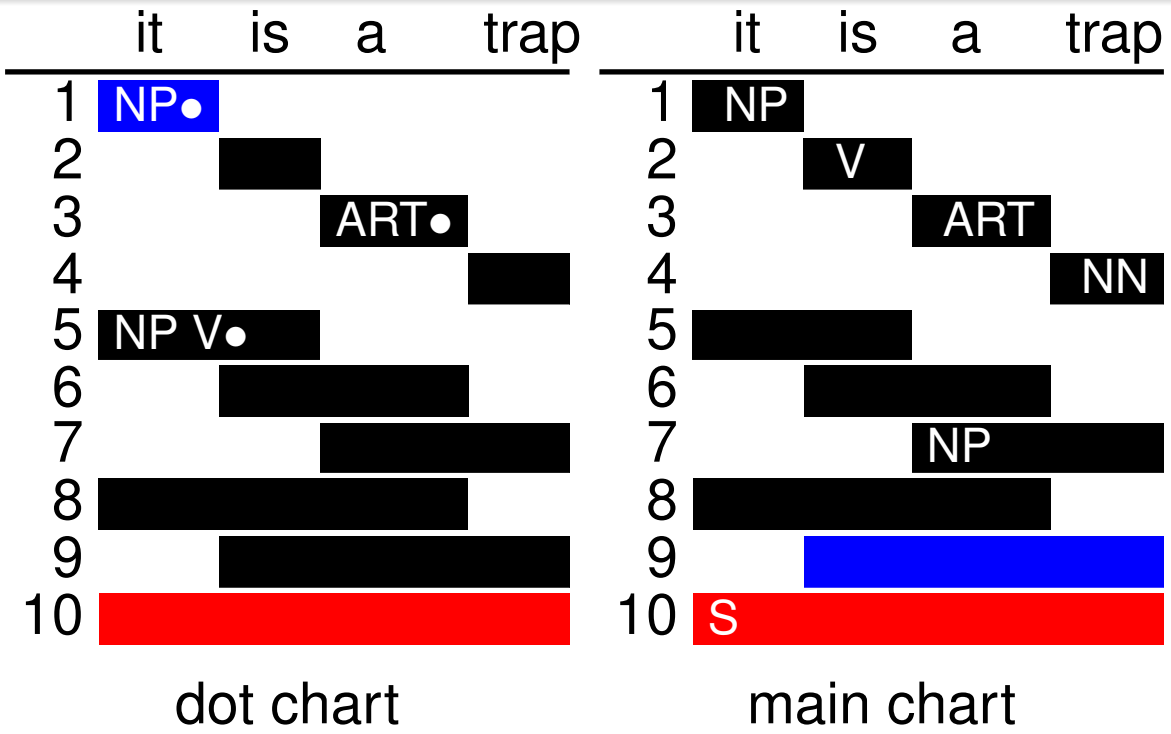
- allows recombination of different dotted items
  $\rightarrow$ does not apply to SCFG decoding
- allows re-use of same dotted item for different spans



The dot chart in SCFG decoding

purpose of dot chart

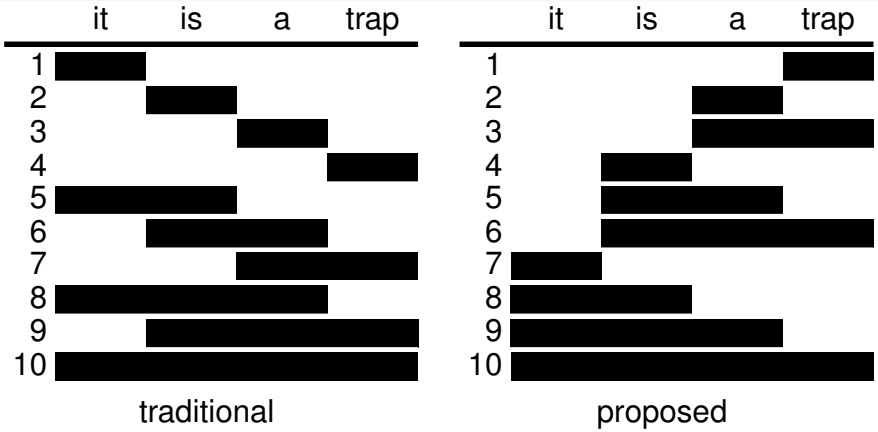
- allows recombination of different dotted items
  $\rightarrow$ does not apply to SCFG decoding
- allows re-use of same dotted item for different spans



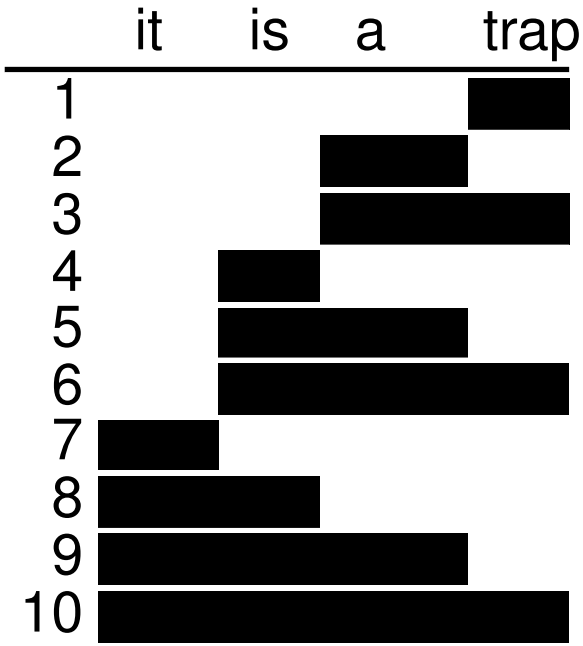
A recursive variant

Core idea

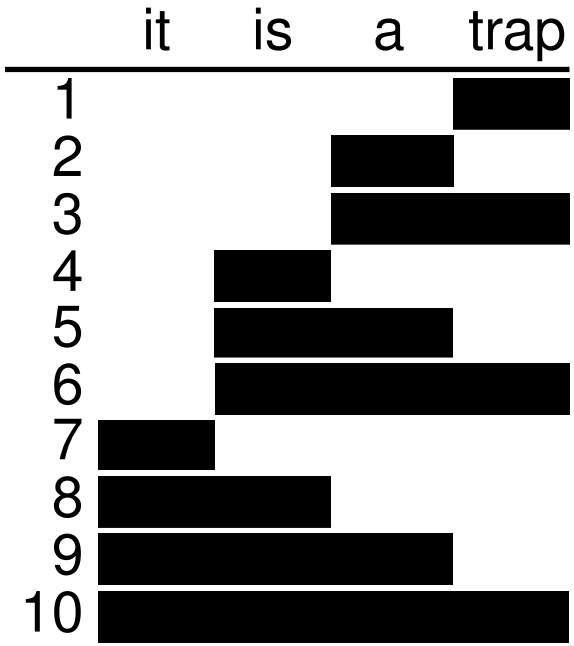
- we do not initially know if rule prefix application can be extended.
  $\rightarrow$ dotted items are re-visited throughout time.
- we can change chart traversal order to guarantee that when span (i,k) is visited, all spans (k,j) have been visited before.
- this eliminates need to store dotted items;
  instead, they are extended recursively, then discarded.



Recursive CYK+



dot chart



main chart

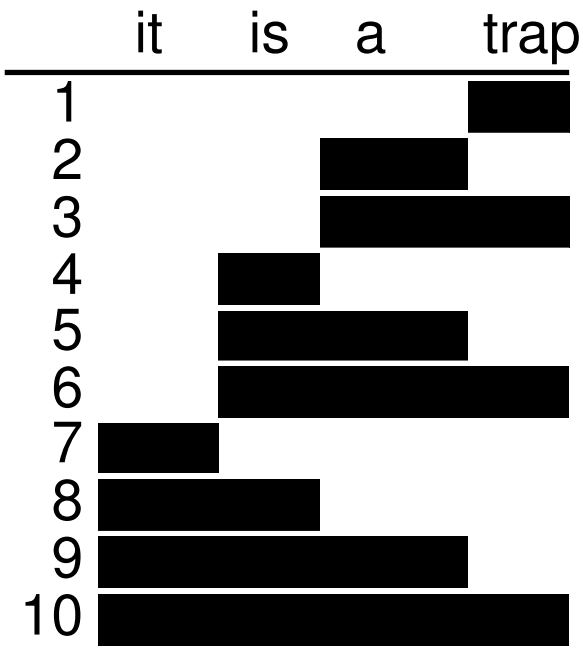
$$
\begin{aligned}
S &\rightarrow NP\ V\ NP \\
NP &\rightarrow ART\ NN \\
NP &\rightarrow \textit{it} \\
V &\rightarrow \textit{is} \\
ART &\rightarrow \textit{a} \\
NN &\rightarrow \textit{trap}
\end{aligned}
$$

grammar

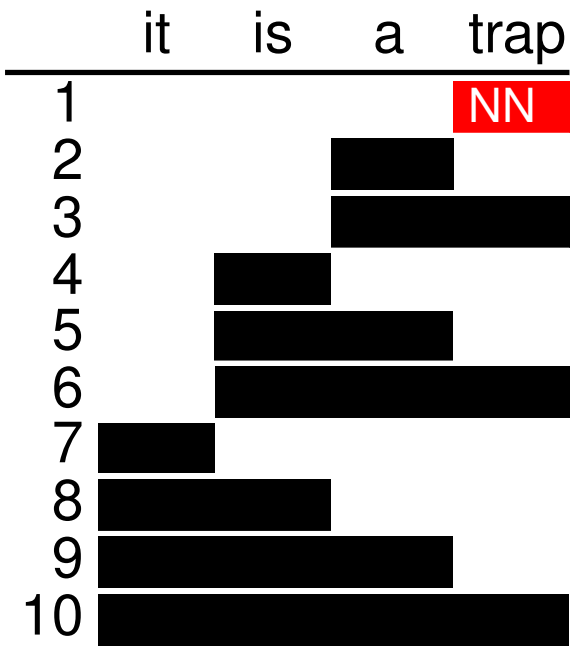
recursive CYK+ steps

1. search for terminal rule of size 1.
2. initial call to rule consume function.
3. recursive call to rule consume function.

Recursive CYK+



dot chart



main chart

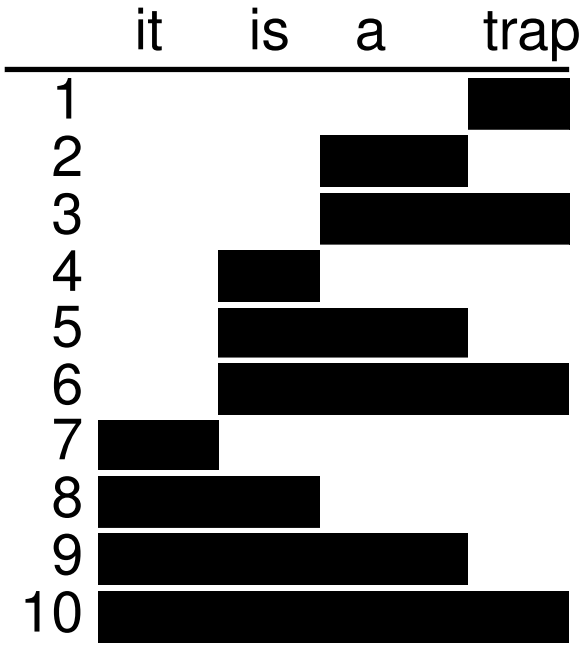
$$
\begin{aligned}
S &\rightarrow NP\ V\ NP \\
NP &\rightarrow ART\ NN \\
NP &\rightarrow \textit{it} \\
V &\rightarrow \textit{is} \\
ART &\rightarrow \textit{a} \\
NN &\rightarrow \textit{trap}
\end{aligned}
$$

grammar

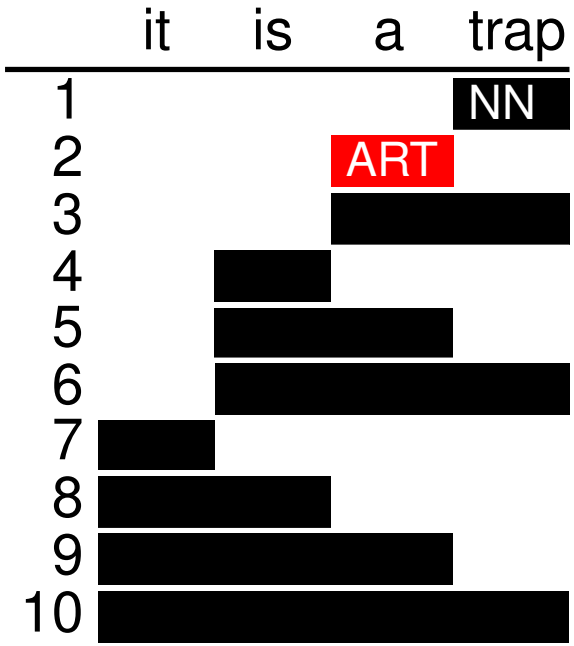
recursive CYK+ steps

1. search for terminal rule of size 1.
2. initial call to rule consume function.
3. recursive call to rule consume function.

Recursive CYK+



dot chart



main chart

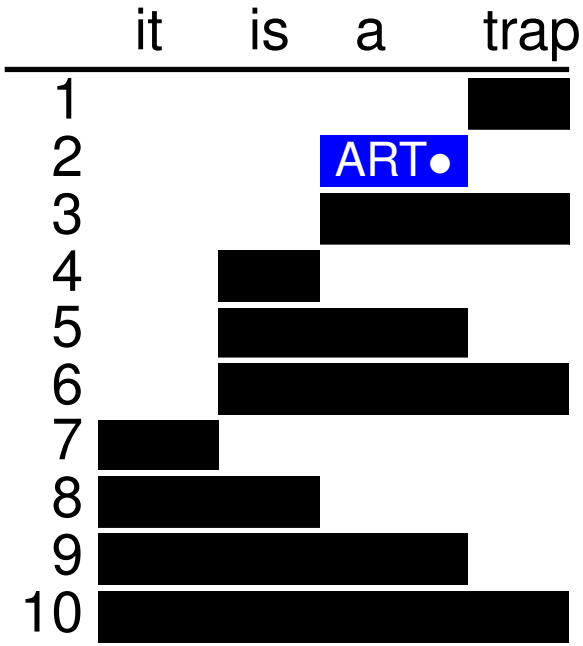
$$
\begin{aligned}
S &\rightarrow NP\ V\ NP \\
NP &\rightarrow ART\ NN \\
NP &\rightarrow \textit{it} \\
V &\rightarrow \textit{is} \\
ART &\rightarrow \textit{a} \\
NN &\rightarrow \textit{trap}
\end{aligned}
$$

grammar

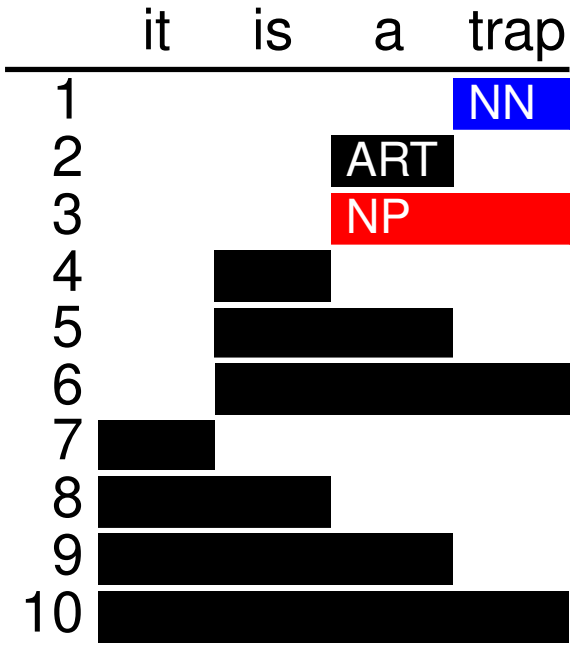
recursive CYK+ steps

1. search for terminal rule of size 1.
2. initial call to rule consume function.
3. recursive call to rule consume function.

Recursive CYK+



dot chart



main chart

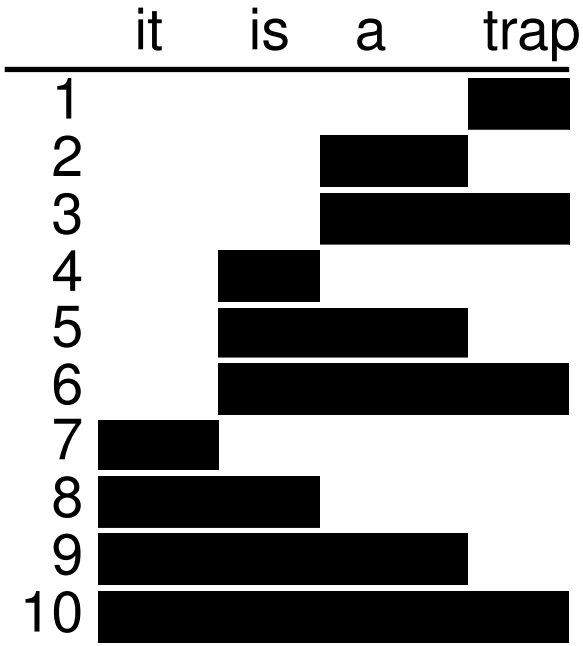
$$
\begin{aligned}
S &\rightarrow NP\ V\ NP \\
NP &\rightarrow ART\ NN \\
NP &\rightarrow \textit{it} \\
V &\rightarrow \textit{is} \\
ART &\rightarrow \textit{a} \\
NN &\rightarrow \textit{trap}
\end{aligned}
$$

grammar

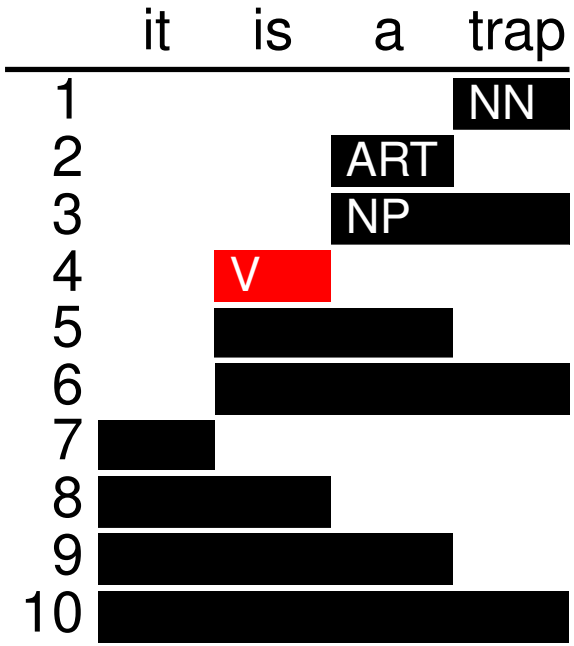
recursive CYK+ steps

1. search for terminal rule of size 1.
2. initial call to rule consume function.
3. recursive call to rule consume function.

Recursive CYK+



dot chart



main chart

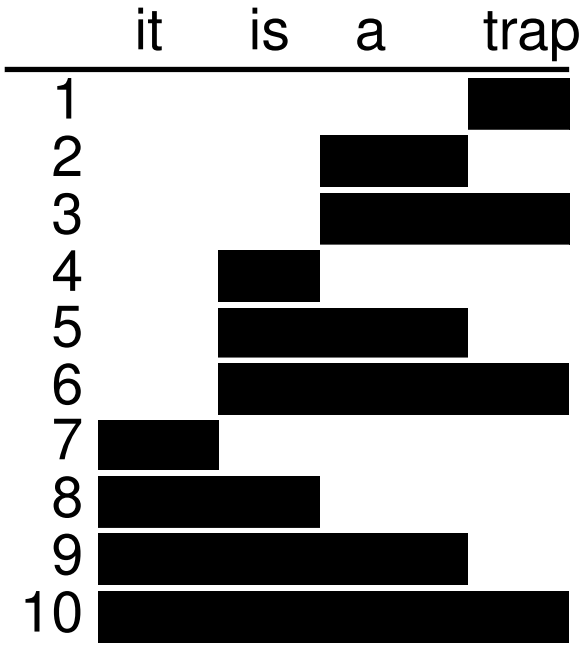
$$
\begin{aligned}
S &\rightarrow NP\ V\ NP \\
NP &\rightarrow ART\ NN \\
NP &\rightarrow \textit{it} \\
V &\rightarrow \textit{is} \\
ART &\rightarrow \textit{a} \\
NN &\rightarrow \textit{trap}
\end{aligned}
$$

grammar

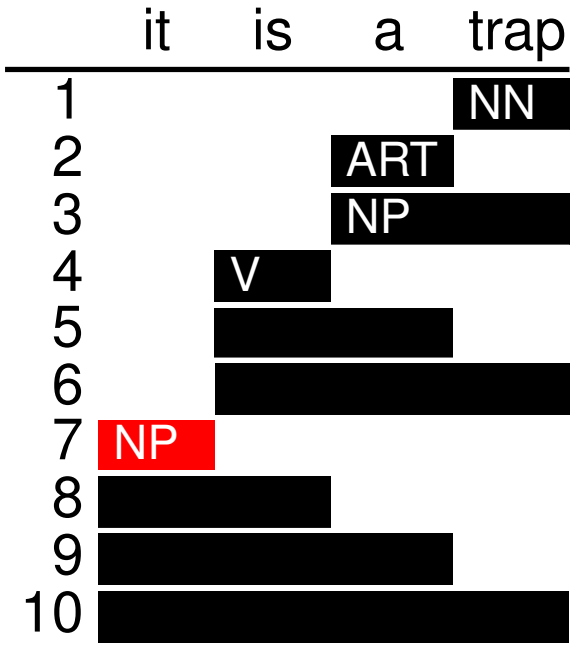
recursive CYK+ steps

1. search for terminal rule of size 1.
2. initial call to rule consume function.
3. recursive call to rule consume function.

Recursive CYK+



dot chart



main chart

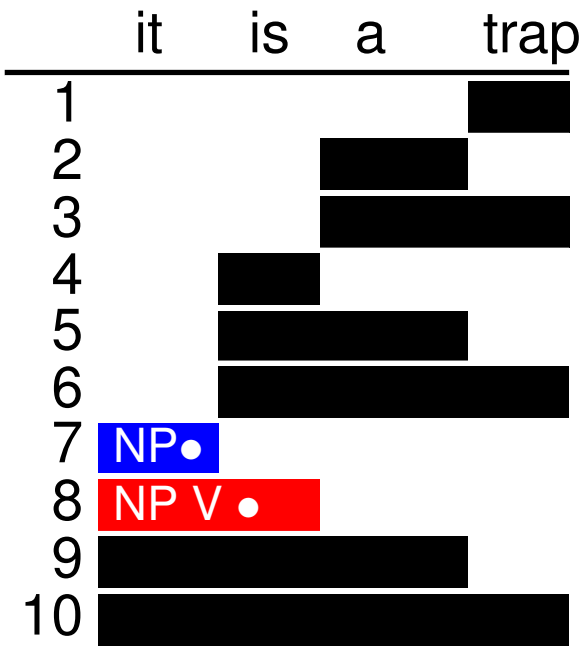
$$
\begin{aligned}
S &\rightarrow \text{NP V NP} \\
\text{NP} &\rightarrow \text{ART NN} \\
\text{NP} &\rightarrow \textit{it} \\
\text{V} &\rightarrow \textit{is} \\
\text{ART} &\rightarrow \textit{a} \\
\text{NN} &\rightarrow \textit{trap}
\end{aligned}
$$

grammar

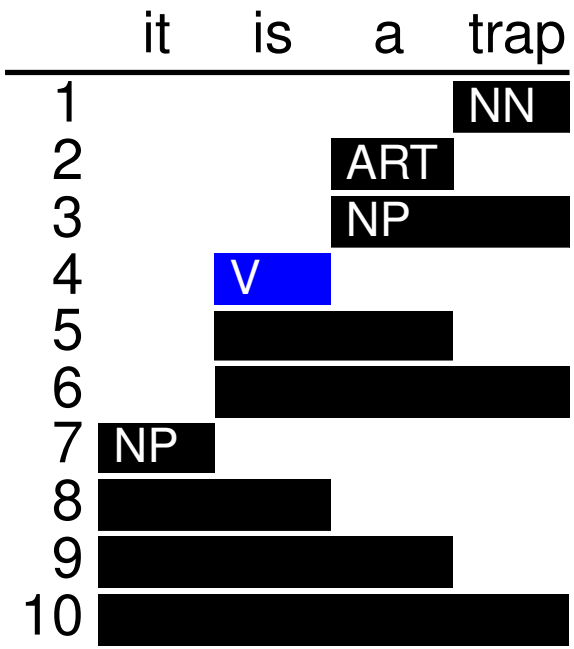
recursive CYK+ steps

1. search for terminal rule of size 1.
2. initial call to rule consume function.
3. recursive call to rule consume function.

Recursive CYK+



dot chart



main chart

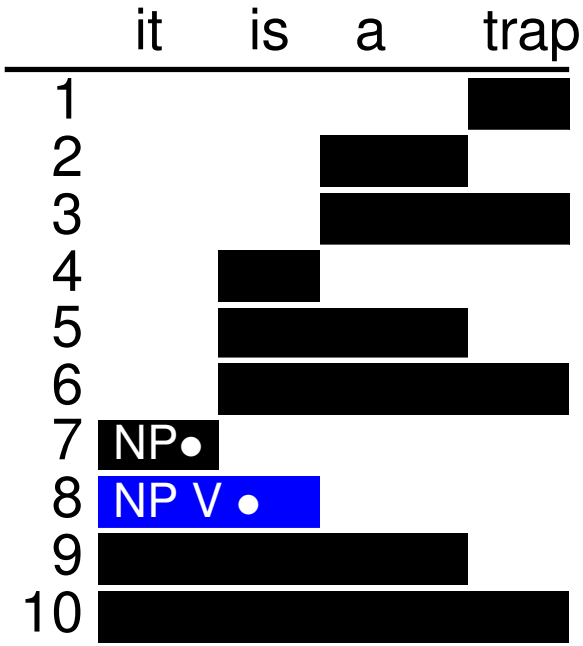
$$
\begin{aligned}
S &\rightarrow NP\ V\ NP \\
NP &\rightarrow ART\ NN \\
NP &\rightarrow \textit{it} \\
V &\rightarrow \textit{is} \\
ART &\rightarrow \textit{a} \\
NN &\rightarrow \textit{trap}
\end{aligned}
$$

grammar

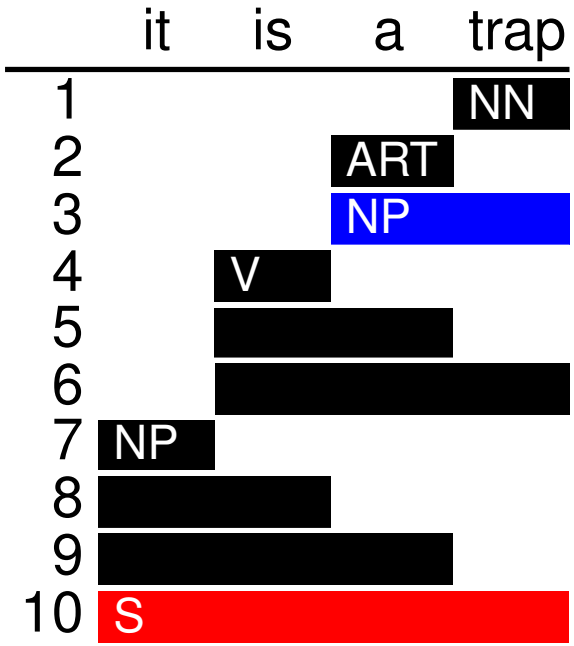
recursive CYK+ steps

1. search for terminal rule of size 1.
2. initial call to rule consume function.
3. recursive call to rule consume function.

Recursive CYK+



dot chart



main chart

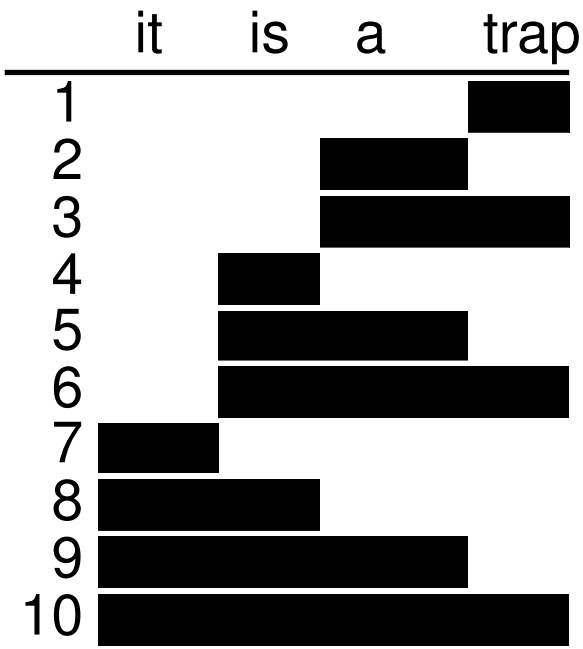
$$
\begin{aligned}
S &\rightarrow NP\ V\ NP \\
NP &\rightarrow ART\ NN \\
NP &\rightarrow \textit{it} \\
V &\rightarrow \textit{is} \\
ART &\rightarrow \textit{a} \\
NN &\rightarrow \textit{trap}
\end{aligned}
$$

grammar

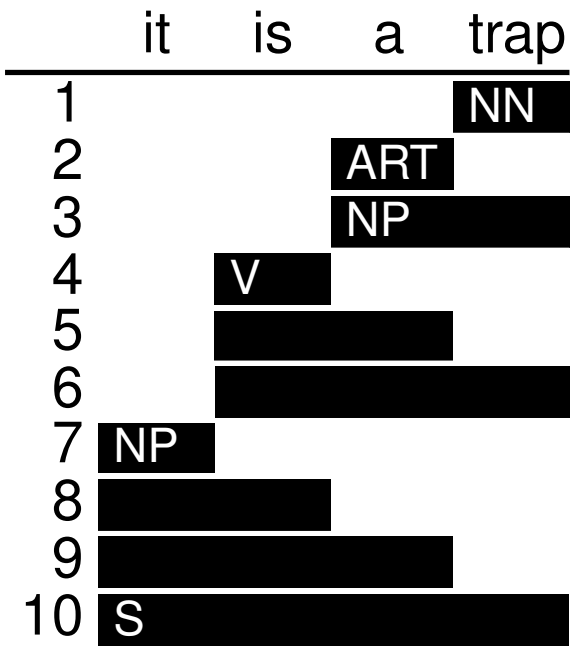
recursive CYK+ steps

1. search for terminal rule of size 1.
2. initial call to rule consume function.
3. recursive call to rule consume function.

Recursive CYK+



dot chart



main chart

$$
\begin{aligned}
S &\rightarrow \text{NP V NP} \\
\text{NP} &\rightarrow \text{ART NN} \\
\text{NP} &\rightarrow \textit{it} \\
\text{V} &\rightarrow \textit{is} \\
\text{ART} &\rightarrow \textit{a} \\
\text{NN} &\rightarrow \textit{trap}
\end{aligned}
$$

grammar

recursive CYK+ steps

1. search for terminal rule of size 1.
2. initial call to rule consume function.
3. recursive call to rule consume function.

Implementation notes

- dot chart exists implicitly in stack of recursive function: $O(|R|)$
- each rule prefix application is constructed exactly once.
- rule applications may be found asynchronously; we keep (pruned) list for each span, and perform cube pruning synchronously.
  $\rightarrow$ no difference in translation output to original CYK+ algorithm.

Evaluation

Task

- English→German string-to-tree SMT system [Williams et al., 2014]
- grammar pruned to scope 3 [Hopkins and Langmead, 2010]
- all algorithms implemented in Moses
- focus on memory and speed (same translation)
- we ignore memory cost and loading times of model

Baselines

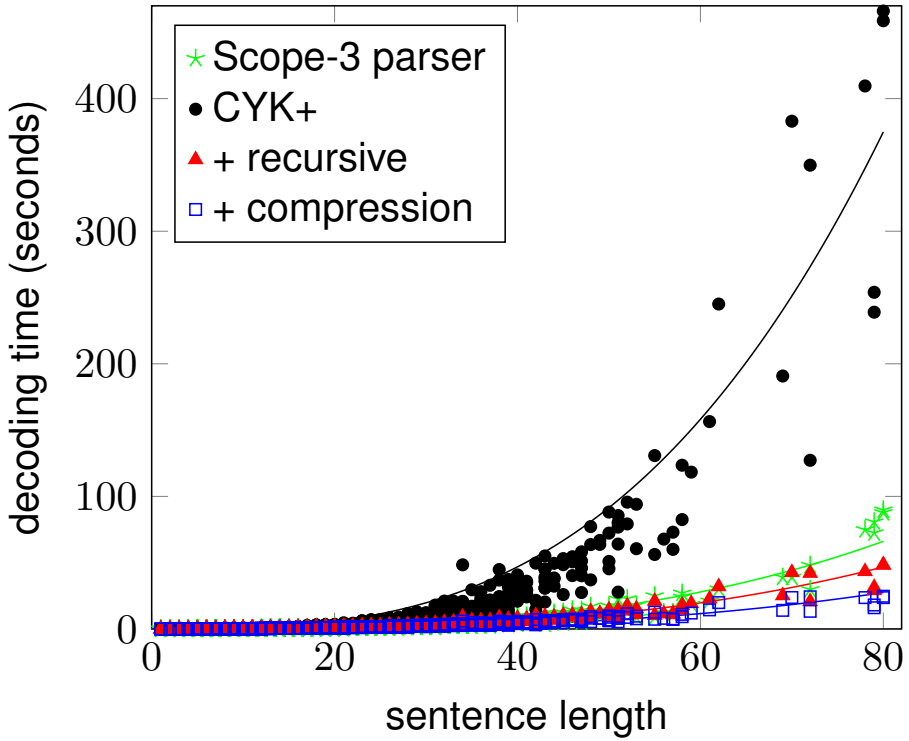
- CYK+
- Scope-3 parser [Williams and Koehn, 2012]; inspired by [Hopkins and Langmead, 2010]
  no dot chart, but more complex algorithm that constructs lattice for each rule and span representing all rule applications.

Evaluation: memory

algorithm	$n = 20$	$n = 40$	$n = 80$
Scope-3	0.02	0.04	0.34
CYK+	0.32	2.63	51.64
+ recursive	0.02	0.04	0.15
+ compression	0.02	0.04	0.15

Table : Peak memory consumption (in GB) of string-to-tree SMT decoder

Evaluation: speed



algorithm	length 80		average	
	parse	total	parse	total
Scope-3	74.5	81.1	1.9	2.6
CYK+	358.0	365.4	8.4	9.1
+ recursive	33.7	40.1	1.5	2.2
+ compression	15.0	21.2	1.0	1.7

Table : Parse time and total decoding time per sentence (in seconds).

Discussion

Is Recursive CYK+ ever a bad Idea?

- complexity characteristics are different in monolingual case
- there might be smarter ways to organize/prune dot chart
  $\rightarrow$ memory consumption will still be worse
  $\rightarrow$ pruning non-trivial because dotted item represents many rule
- little effect for grammars with scope < 3
  $\rightarrow$ true for default hiero extraction heuristics

Conclusion

Summary

- dot chart is common, but of limited use in SCFG decoding
- reordering of chart traversal eliminates need for dot chart
- no speed-memory trade-off: recursive variant consumes less memory **and** is faster than CYK+
- in the poster: matrix compression for more efficiency gains
- algorithm narrows efficiency gap between phrase-based and syntax-based (string-to-tree) systems
- new default in Moses

Thank you!
